(U//~~FOUO~~) The FBI's investigation and forensic analysis did not find evidence confirming that Clinton's e-mail accounts or mobile devices were compromised by cyber means. However, investigative limitations, including the FBI's inability to obtain all mobile devices and various computer components associated with Clinton's personal e-mail systems, prevented the FBI from conclusively determining whether the classified information transmitted and stored on Clinton's personal server systems was compromised via cyber intrusion or other means. The FBI did find that hostile foreign actors successfully gained access to the personal e-mail accounts of individuals with whom Clinton was in regular contact and, in doing so, obtained e-mails sent to or received by Clinton on her personal account.

1. (U//~~FOUO~~) Clinton's Personal E-Mail Server Systems

A. (U ~~FOUO~~) Initial E-mail Server: June 2008 – March 2009

(U//~~FOUO~~) In or around 2007, Justin Cooper, at the time an aide to former President William Jefferson Clinton (President Clinton), purchased an Apple OS X server (Apple Server) for the sole purpose of hosting e-mail services for President Clinton's staff.[1,2] Due to concern over ensuring e-mail reliability and a desire to segregate e-mail for President Clinton's various post-presidency endeavors, President Clinton's aides decided to maintain physical control of the Apple Server in the Clinton residence in Chappaqua, New York (Chappaqua residence).[3,4,5] According to Cooper, in or around June 2008, a representative from Apple installed the Apple

[b] (U//~~FOUO~~) The number of classified e-mail chains identified may change as classification determination responses continue to be returned to the FBI.
